Creating an Index During Data Step Execution

Creating An Index during Data Step Excecution

If you choose, you can construct a simple or composite index during the execution of the data step.

For example: (simple index)

data nameofdatasetbeingcreated(index=(LSOAC /));

set whichdatasetyouwanttoread;

… more SAS Statements…

run; **//

Composite Index

data nameofdatasetbeingcreated(index=(compind=(CrimeID LSOAC) / nomiss));

set whichdatasetyouwanttoread;

… more SAS Statements…

run;
