

# Which Software Should You Use?

## *Which software solution should you use for this course?*

All learners from the United States should register for 'SAS OnDemand for Academics'. This software is also called SAS Studio. It allows you to program in the cloud by logging into a web browser. There are no downloads or setups to do, making it super easy. You do not have to be an academic to use it.

Please type "SAS OnDemand for Academics" into Google, and you will see a link that takes you to the SAS website to begin your registration process.

The link on Google looks similar to

this: [https://www.sas.com/en\\_ca/software/on-demand-for-academics.html](https://www.sas.com/en_ca/software/on-demand-for-academics.html).

For readers in the rest of the world, you can use SAS Studio, but you can also use the World Programming System (WPS). I use WPS only because the commercial license (which I must use to teach) is considerably less expensive than the SAS Institute version.

All the preceding software options are FREE if you are using them for learning purposes (you make no money from using the software).

Regards,

Ermin
